Adoption of Progressive Dividend Policy

- ✓ Progressive Dividend: Previous year's dividend is the floor for the current year's dividend. Dividend will be raised (or kept flat) but not cut, providing shareholders with downside dividend protection
- ✓ Newly setting minimum DOE (dividend on equity) payout ratio of >3 %
 - Dividend payout ratio policy: Dividends based on annual earnings → More volatile
 - DOE policy: Dividends based on shareholder equity → More Stable
- ✓ Combination of progressive dividend and DOE-based payout policy will significantly increase the security, certainty, and visibility of the dividend to the benefit of Ichigo's shareholders
- ✓ Also underscores Ichigo's commitment to driving continued organic earnings and dividend growth for its shareholders

Reference: Japanese Feed-in-Tariff (FIT)

What is a FIT?

- A policy mechanism designed to accelerate the deployment of renewable energy such as solar and wind, guaranteeing a long-term sale price for electricity (in Japan, 20 years) at a fixed price.
- Japan's FIT is updated every year.

Contract Date	Tariff per 1kWh*	Guarantee Period	Contract Date	Tariff per 1kWh*	Guarantee Period
FY2012	40 yen	20 years	FY2015(4/1-6/30)	29 yen	20 years
FY2013	36 yen	20 years	FY2015(7/1-3/3)	27 yen	20 years
FY2014	32 yen	20 years	FY2016	24 yen	20 years

*Pre-consumption tax FIT for power plants with output of >10kW

Current Regulatory Framework and Ichigo Plant Status

- Utilities are allowed to suspend its renewable energy supply without compensation if supply exceeds demand. The maximum suspension duration is total 30 days or 360 hours per annum.
- Although utilities are not allowed to suspend the acceptance of applications (based on the “Act on Special Measures concerning the Procurement of Renewable Electric Energy by Operators of Electric Utilities”), approval for grid connection is pending for many solar power suppliers. All of Ichigo's power plants have grid connection approvals.
- In certain cases, utilities that are potentially subject to renewable energy production that exceeds their grid capacity are allowed to suspend renewable energy supply from new suppliers without limit and without compensation. None of Ichigo's power plants are subject to these suspensions.
