Ichigo ECO Solar Power Plant Operational Update

Ichigo Group Holdings (“Ichigo”) established Ichigo ECO Energy Co., Ltd. and launched its ECO renewable energy business in 2012 with the aim to contribute to a sustainable society by promoting renewable energy across Japan.

Of Ichigo’s 24 operating and in-development solar power plants (83MW), 21 have approved grid interconnections and/or signed power sale contracts to the regional electric utility. With respect to the other three solar power plants, grid interconnection applications have been submitted and are being processed, with none of the three projects being subject to the utilities’ “suspension of acceptance of applications” (*setsuzoku kentou kekka no kaitou horyuu*). In sum, all of Ichigo’s solar power plants are progressing as planned.

The following provides details on the Ichigo solar power plants currently operational and in-development.
