Explanation

Power generation in December 2014 was 1,140,094 kWh, 8% above the forecast P50[1] power production of 1,053,000 kWh. The P50 forecast for January 2015 is 1,345,000 kWh, as the Ichigo Higashi-Hiroshima Saijocho Taguchi ECO Power Plant will begin operation on January 10.

[1] P50 is a third-party, 50% probability mean annual production forecast that serves as the base forecast for each solar power plant's operating plan.

CO2 reduction is calculated as 0.66kg CO2 per kWh.

Detailed production data for each Ichigo solar power plant is available on the website of Ichigo ECO Energy: www.ichigo-holdings.co.jp/eco/english/
