Explanation

Power generation in January was 1,254,499 kWh, 6.75% below the P50² power production forecast of 1,345,000 kWh due to a higher number of snowfall days than forecast. With the Nago Futami and Engaru Higashimachi plants coming online this week, the P50 forecast for February is 2,317,000 kWh.

¹ CO2 reduction is calculated as 0.66kg CO2 per kWh.

² P50 is a third-party, 50% probability mean annual production forecast that serves as the base forecast for each solar power plant's operating plan.

Detailed production data for each Ichigo solar power plant is available on the website of Ichigo ECO Energy: www.ichigo-holdings.co.jp/eco/english/
