Explanation

Power generation in March was 3,203,083 kWh, falling short of the P50² power production forecast of 3,308,000 kWh. While record-breaking snowfalls lowered power generation in Hokkaido to 15% below the P50 forecast, power generation outside Hokkaido exceeded the forecast by 7%. Total power generation was thus just 3% below forecast, underscoring the strength of Ichigo's diversified power plant portfolio. The P50 forecast for April is 3,396,000 kWh.

¹ CO₂ reduction is calculated as 0.66kg CO₂ per kWh.

² P50 is a third-party, 50% probability mean annual production forecast that serves as the base forecast for each solar power plant's operating plan.

Detailed production data for each Ichigo solar power plant is available on the website of Ichigo ECO Energy: www.ichigo-holdings.co.jp/eco/english/
