Explanation

Power generation in June was 3,633,109 kWh, 2.6X year-on-year and 4% above the forecast P50² power production of 3,519,000 kWh. The P50 forecast for July is 3,956,000 kWh, as the Ichigo Miyakonojo Yasuhisacho ECO Power Plant will begin operation this month.

¹ CO² reduction is calculated as 0.66kg CO² per kWh.

² P50 is a third-party, 50% probability mean annual production forecast that serves as the base forecast for each solar power plant's operating plan.

Detailed production data for each Ichigo solar power plant is available on the website of Ichigo ECO Energy: www.ichigo-holdings.co.jp/eco/english/
