### Explanation

Power generation in February was 3,493,432 kWh, a 1.5X increase year-on-year and 3% above the P50<sup>2</sup> power production forecast of 3,387,000 kWh. The P50 forecast for March is 4,658,000 kWh, with the Ichigo Kasaoka Takumicho ECO Power Plant beginning operation this month.

<sup>1</sup> CO<sup>2</sup> reduction is calculated as 0.66kg CO<sup>2</sup> per kWh.

<sup>2</sup> P50 is a third-party, 50% probability mean annual production forecast that serves as the base forecast for each solar power plant's operating plan.

Detailed production data for each Ichigo solar power plant is available on the website of Ichigo ECO Energy: [www.ichigo.gr.jp/eco/english/](http://www.ichigo.gr.jp/eco/english/)
