### Explanation

December Ichigo and Ichigo Green solar power generation was 6,811,885kWh, 15% below forecast and a 5% decline year-on-year due to a below-average number of productive daylight hours across Japan.<sup>2</sup>

<sup>1</sup> CO2 reduction is calculated as 0.66kg CO2 per kWh.

<sup>2</sup> Forecast power generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar power plant’s operating plan.

Note: Ichigo sold two solar power plants to Ichigo Green on July 3, 2017. Ichigo also launched the Ichigo Showamura Ogoose ECO Power Plant (annual forecast power generation: 55,427,000kWh), the Tokyo region's largest solar power plant, on September 2, 2017.

Ichigo discloses realtime solar power production and CO2 reduction data for each Ichigo and Ichigo Green solar power plant at [www.ichigo.gr.jp/en/eco](http://www.ichigo.gr.jp/en/eco)
