* Ichigo Green Infrastructure Investment Corporation (“Ichigo Green,” 9282)

July Ichigo and Ichigo Green solar power generation was 12,051,724kWh, 9% below forecast due to a below-average number of productive daylight hours across Japan.² Last July’s power generation was unusually strong (17% above forecast), so this was a 18% decrease year-on-year.

¹ CO2 reduction is calculated as 0.66kg CO2 per kWh.

² Forecast power generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar power plant’s operating plan.

Note: In addition to its own solar power plants, Ichigo manages 15 plants owned by Ichigo Green. Data for each of these Ichigo Green plants are disclosed in Ichigo Green's monthly release "Solar Power Generation and CO2 Reduction Data" announced today at www.ichigo-green.co.jp/en.

Ichigo also discloses realtime solar power production and CO2 reduction data for each Ichigo and Ichigo Green solar power plant at www.ichigo.gr.jp/en/eco.
