* Ichigo Green Infrastructure Investment Corporation (“Ichigo Green,” 9282)

August Ichigo and Ichigo Green solar power generation was 19,846,511kWh, 13% above forecast, due to an above average number of productive daylight hours along the Pacific and Japan Sea coasts². On a year-on-year basis, power generation increased 43% due to bringing online 6 new power plants since last August.

For the half-year, FY21/2 H1 power generation was 101,579,238kWh, 3% above forecast.

¹ CO2 reduction is calculated as 0.66kg CO2 per kWh.

² Forecast power generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar power plant’s operating plan.

Note: In addition to its own solar power plants, Ichigo manages 15 plants owned by Ichigo Green. Data for each of these Ichigo Green plants are disclosed in Ichigo Green's monthly release "Solar Power Generation and CO2 Reduction Data" announced today at www.ichigo-green.co.jp/en.

Ichigo also discloses realtime solar power production and CO2 reduction data for each Ichigo and Ichigo Green solar power plant at www.ichigo.gr.jp/en/eco.
