* Ichigo Green Infrastructure Investment Corporation (“Ichigo Green,” 9282)

July Ichigo and Ichigo Green solar and wind power generation was 18,446,178kWh, 3% above forecast.² On a year-on-year basis, power generation increased 40% due to an increase in productive daylight hours compared to July 2020, which saw the lowest amount of productive daylight hours since the Japan Meteorological Agency began recording statistics, and bringing online 4 new power plants since August 2020, including Ichigo’s first wind power plant, the Ichigo Yonezawa Itaya ECO Power Plant.

¹ CO2 reduction is calculated as 0.66kg CO2 per kWh.

² Forecast power generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar and wind power plant’s operating plan.

Note: In addition to its own solar and wind power plants, Ichigo manages 15 plants owned by Ichigo Green. Data for each of these Ichigo Green plants are disclosed in today's Ichigo Green release "Solar Power Generation & CO2 Reduction Data" at www.ichigo-green.co.jp/en.

Ichigo discloses realtime solar and wind power production and CO2 reduction data for each Ichigo and Ichigo Green solar and wind power plant at www.ichigo.gr.jp/en/business/sustainable/eco/plant.
